

Drupal Back End Development

Version: 1.0

{Prepared by Rohit Bhasarkar}

Basic Commands:

1. To create new project using composer, use following command

```
composer create-project drupal/recommended-project project_name
```

This command will install new project and use latest version at the time of installation.

If you want to install any particular Drupal version in your project, then use following command.

```
composer create-project drupal/recommended-project:8.8.0 project_name
```

2. To install ant co
